

Events targeting civilians and health spending / gdp

Exposure leads by 2 year(s) | $r = +0.704$ | $p = 3.09e-06$ | adjusted $q = 0.0015$ | $n = 23$

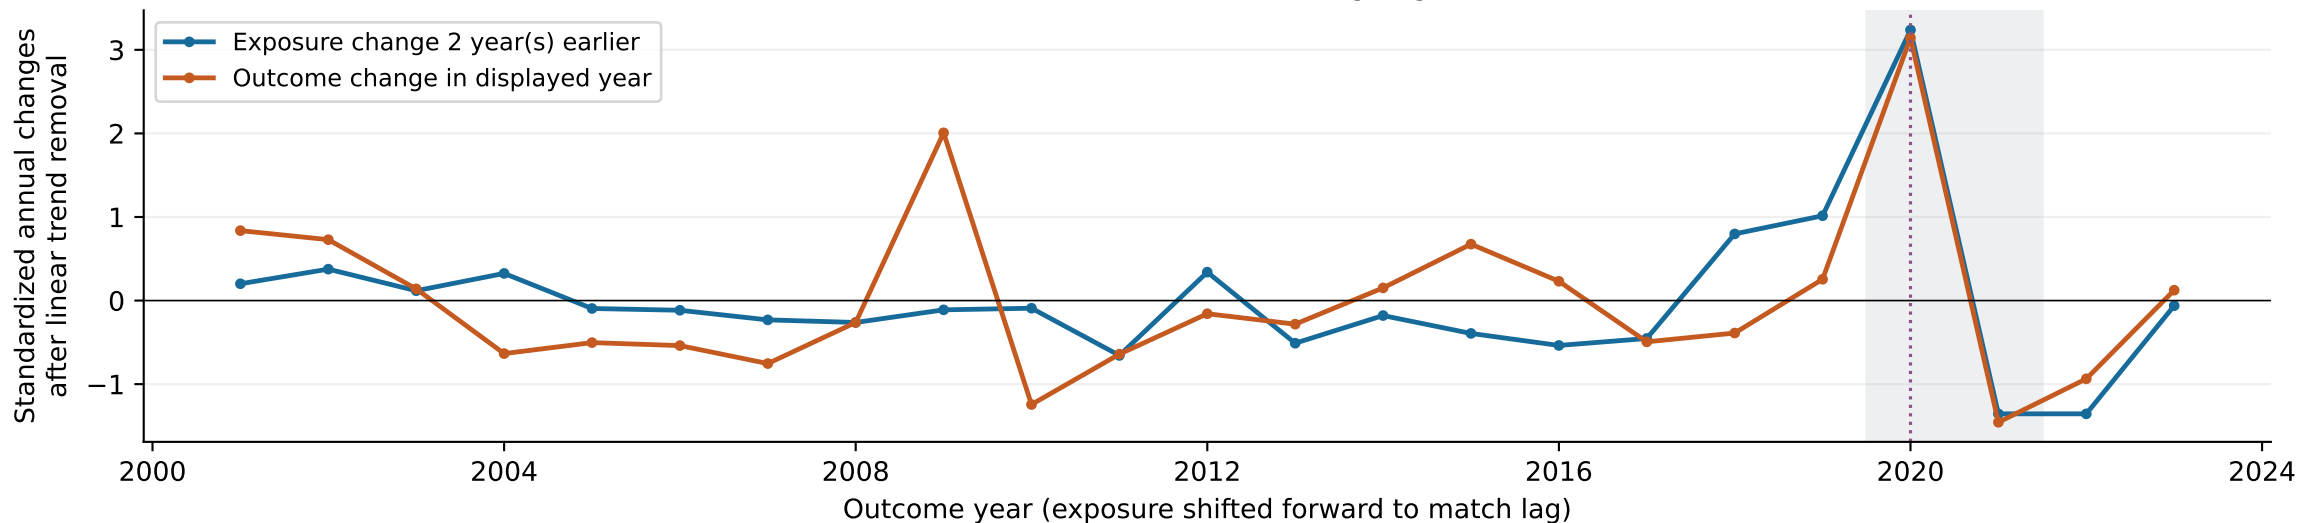

A. Reported exposure rate — original calendar years

B. Health spending / GDP — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

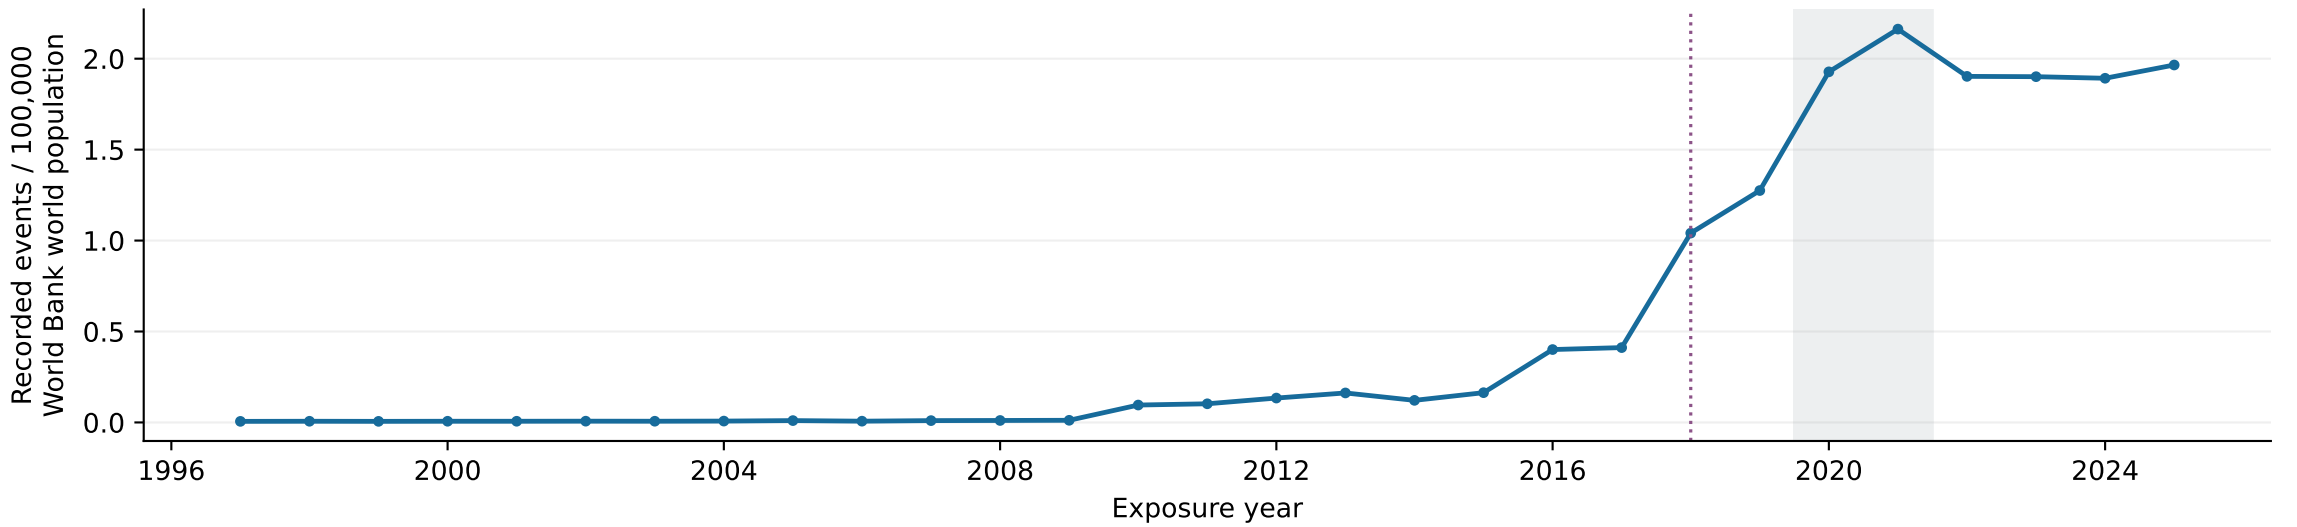

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: $+0.226$; fixed reporting-cohort sensitivity: $+0.228$ (regional exposure).

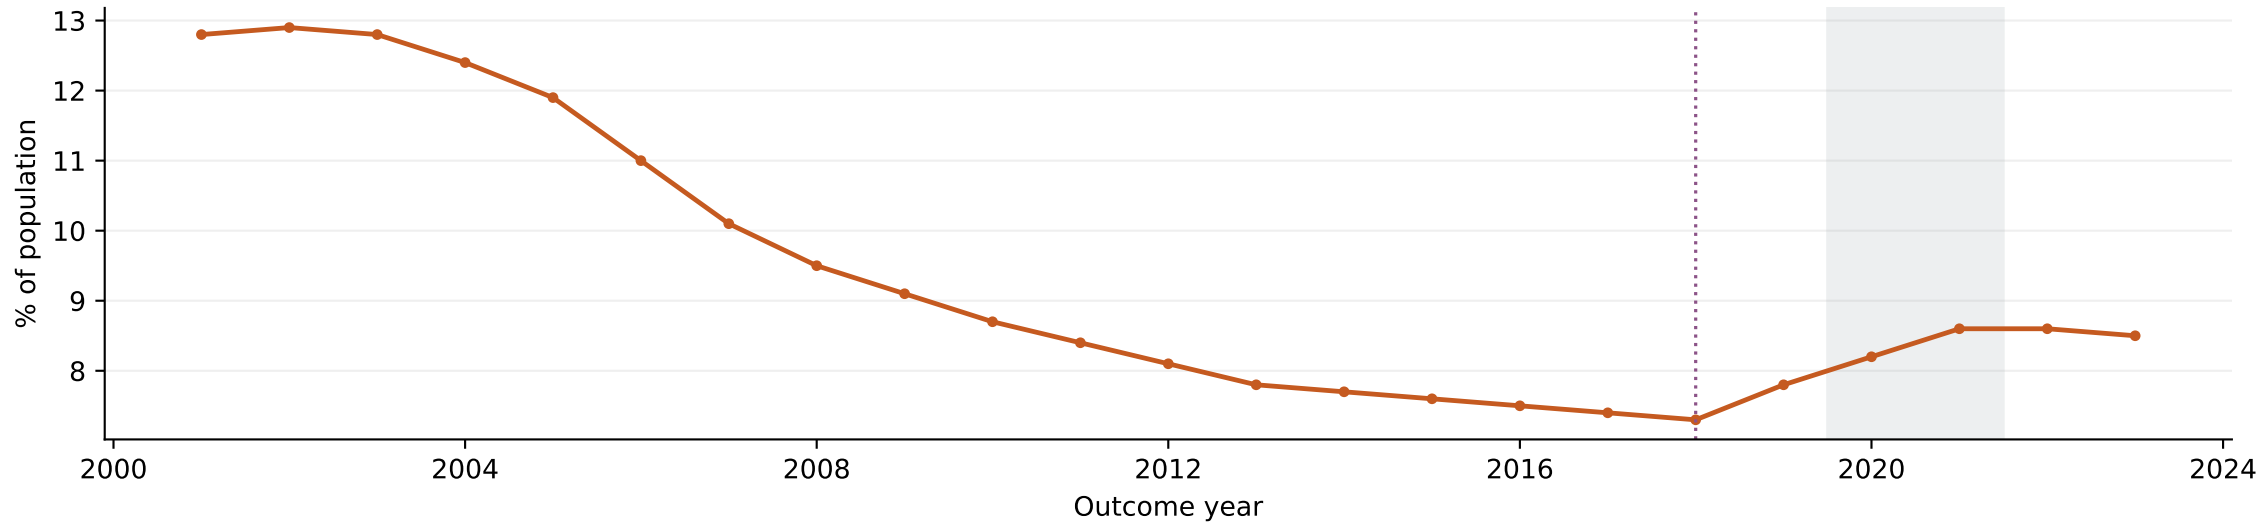

Demonstration events and undernourishment

Exposure leads by 1 year(s) | $r = +0.502$ | $p = 1.84e-05$ | adjusted $q = 0.0044$ | $n = 22$

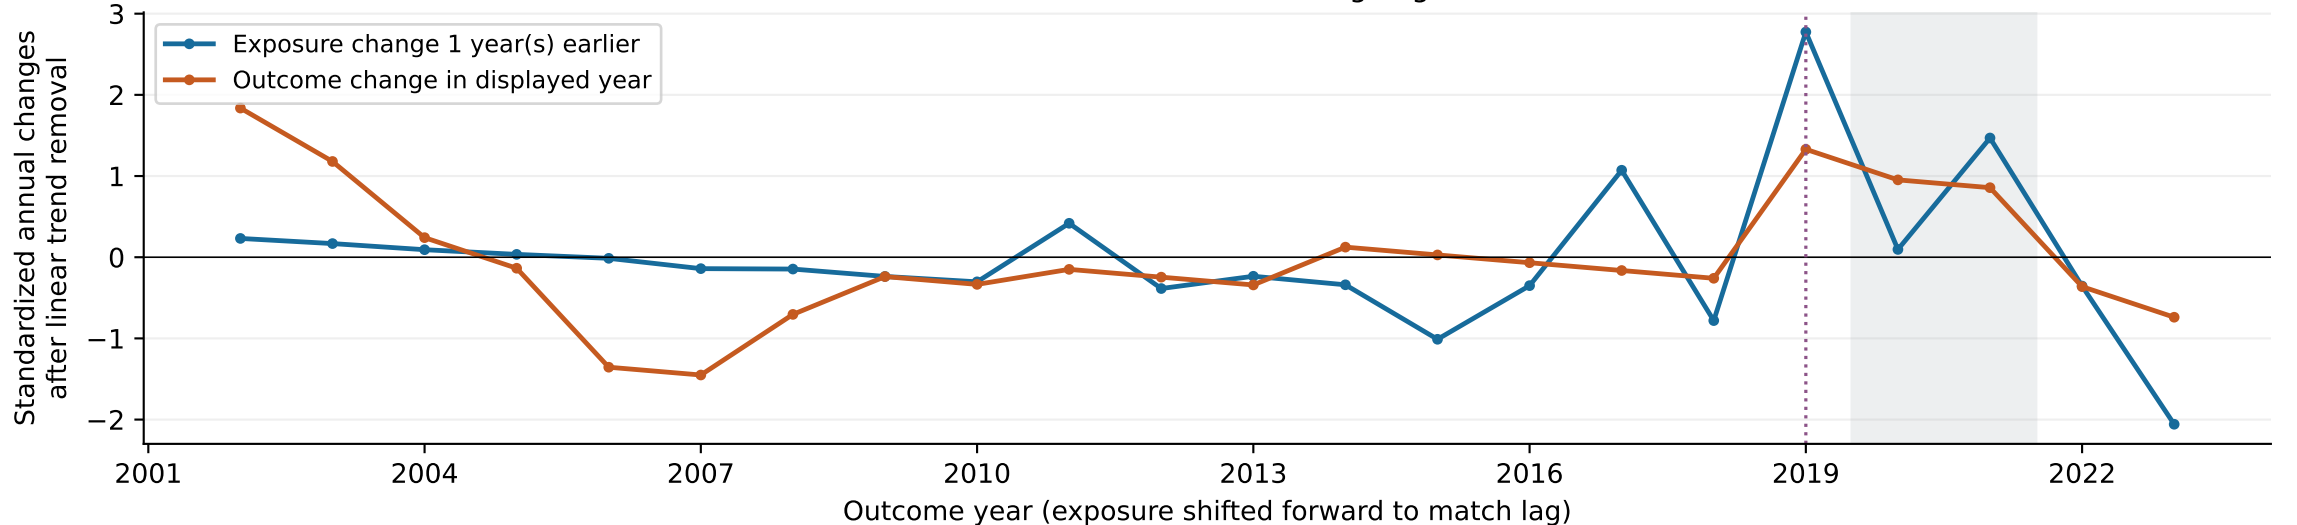

A. Reported exposure rate — original calendar years

B. Undernourishment — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

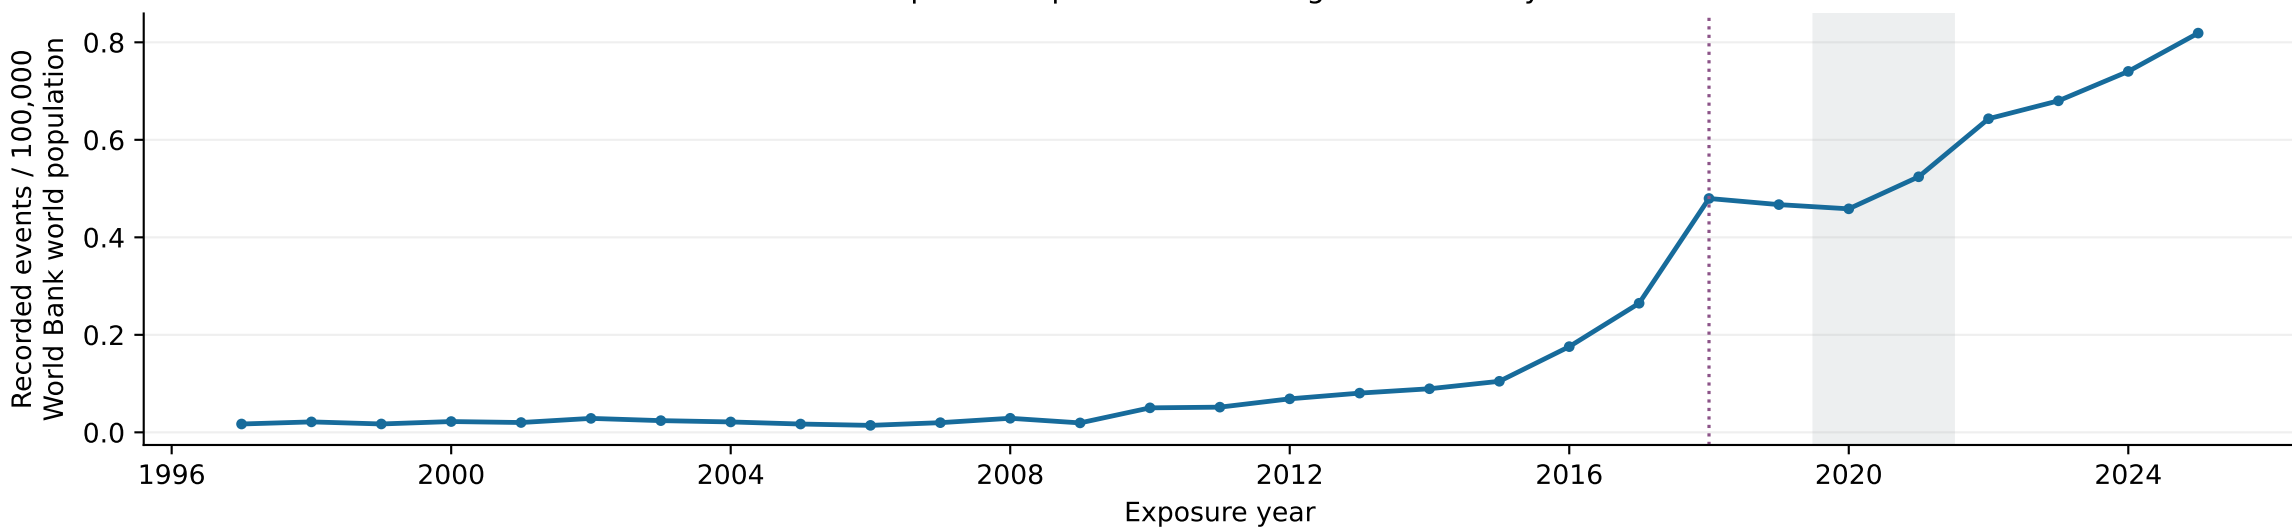

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: $+0.456$; fixed reporting-cohort sensitivity: $+0.266$ (regional exposure).

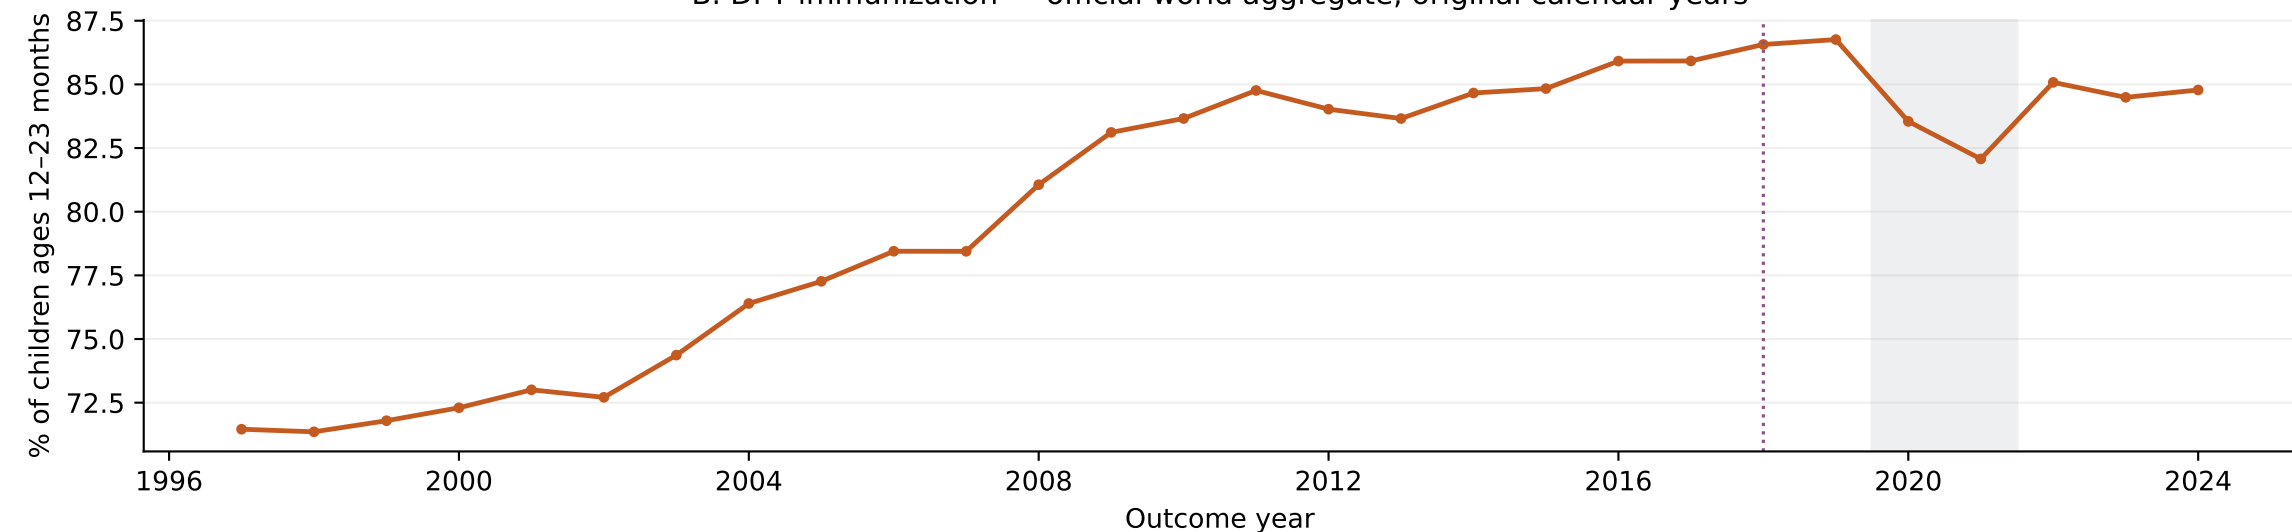

Events targeting civilians and dpt immunization

Exposure leads by 2 year(s) | $r = -0.524$ | $p = 9.94e-05$ | adjusted $q = 0.0120$ | $n = 25$

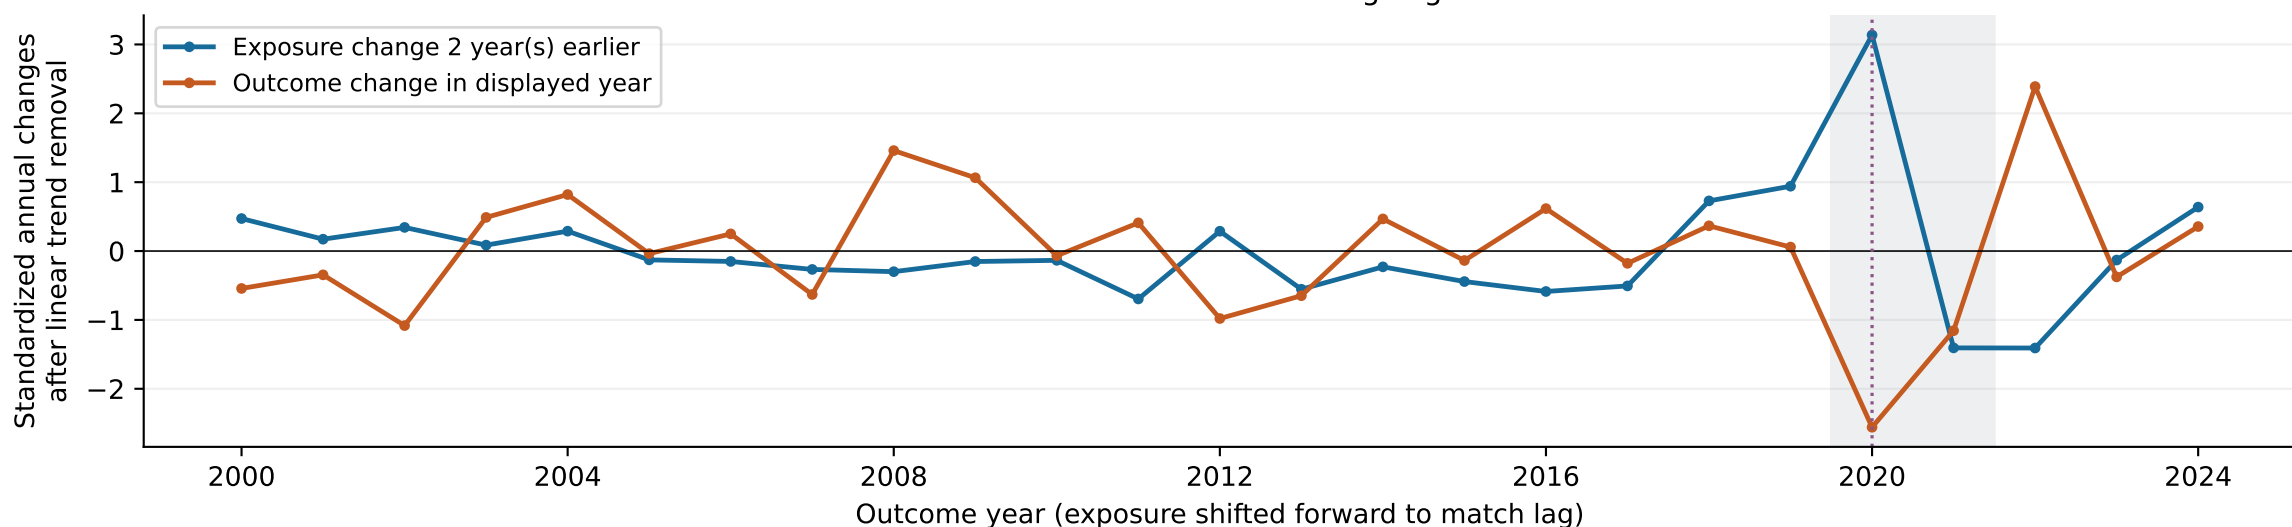

A. Reported exposure rate — original calendar years

B. DPT immunization — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

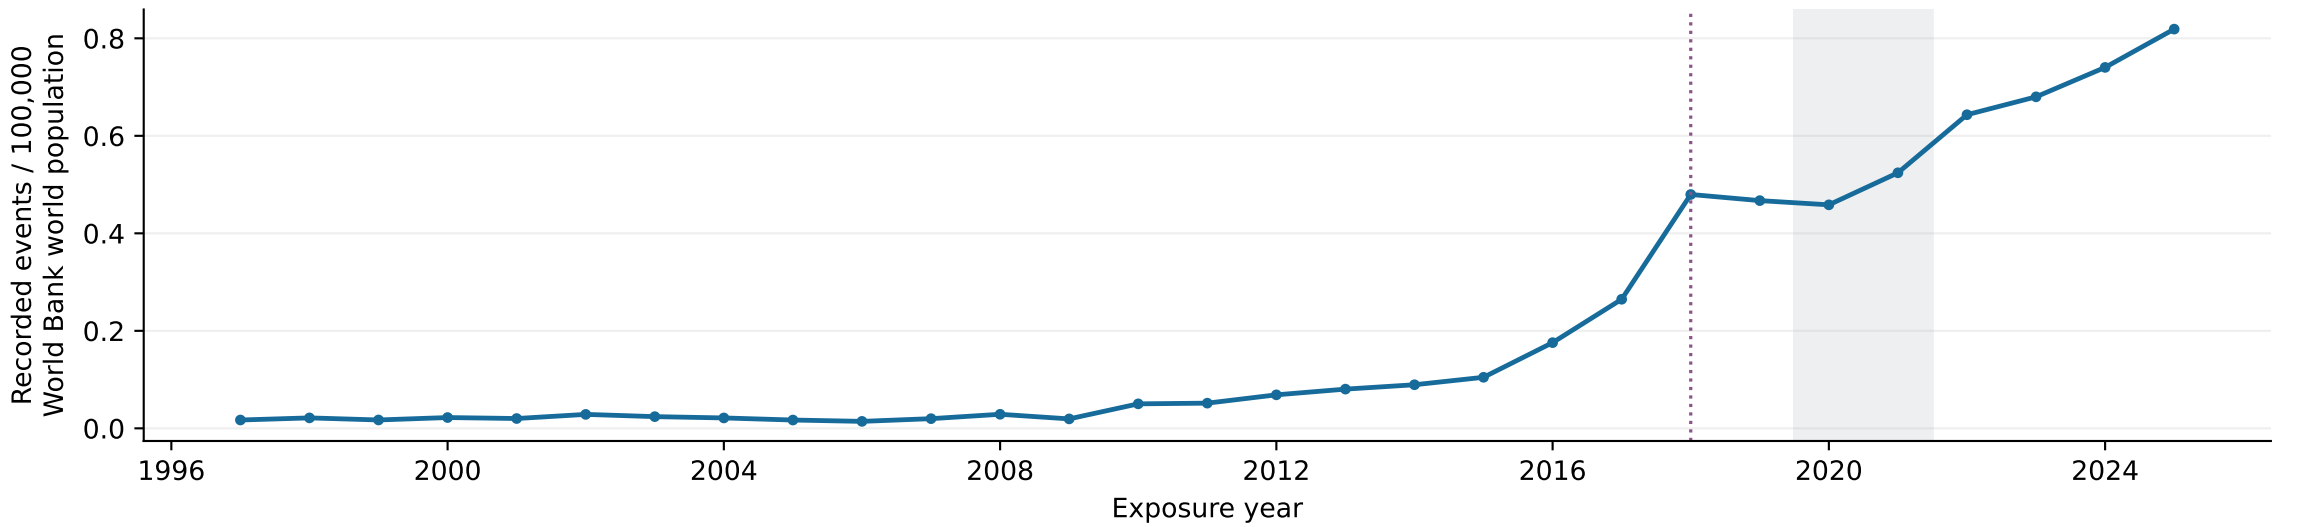

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: -0.395 ; fixed reporting-cohort sensitivity: $+0.026$ (regional exposure).

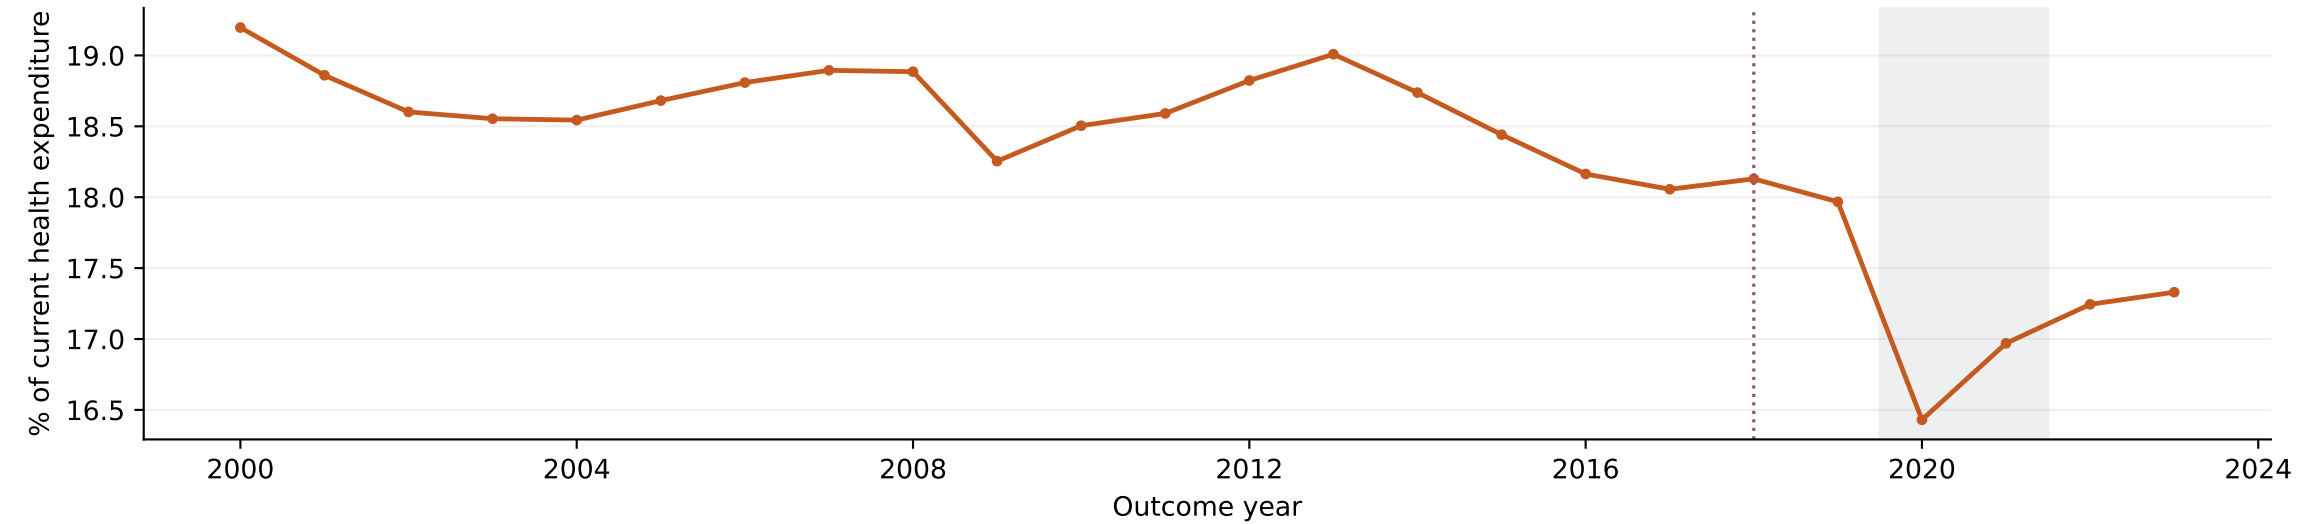

Events targeting civilians and out-of-pocket health spending

Exposure leads by 2 year(s) | $r = -0.754$ | $p = 0.000101$ | adjusted $q = 0.0120$ | $n = 23$

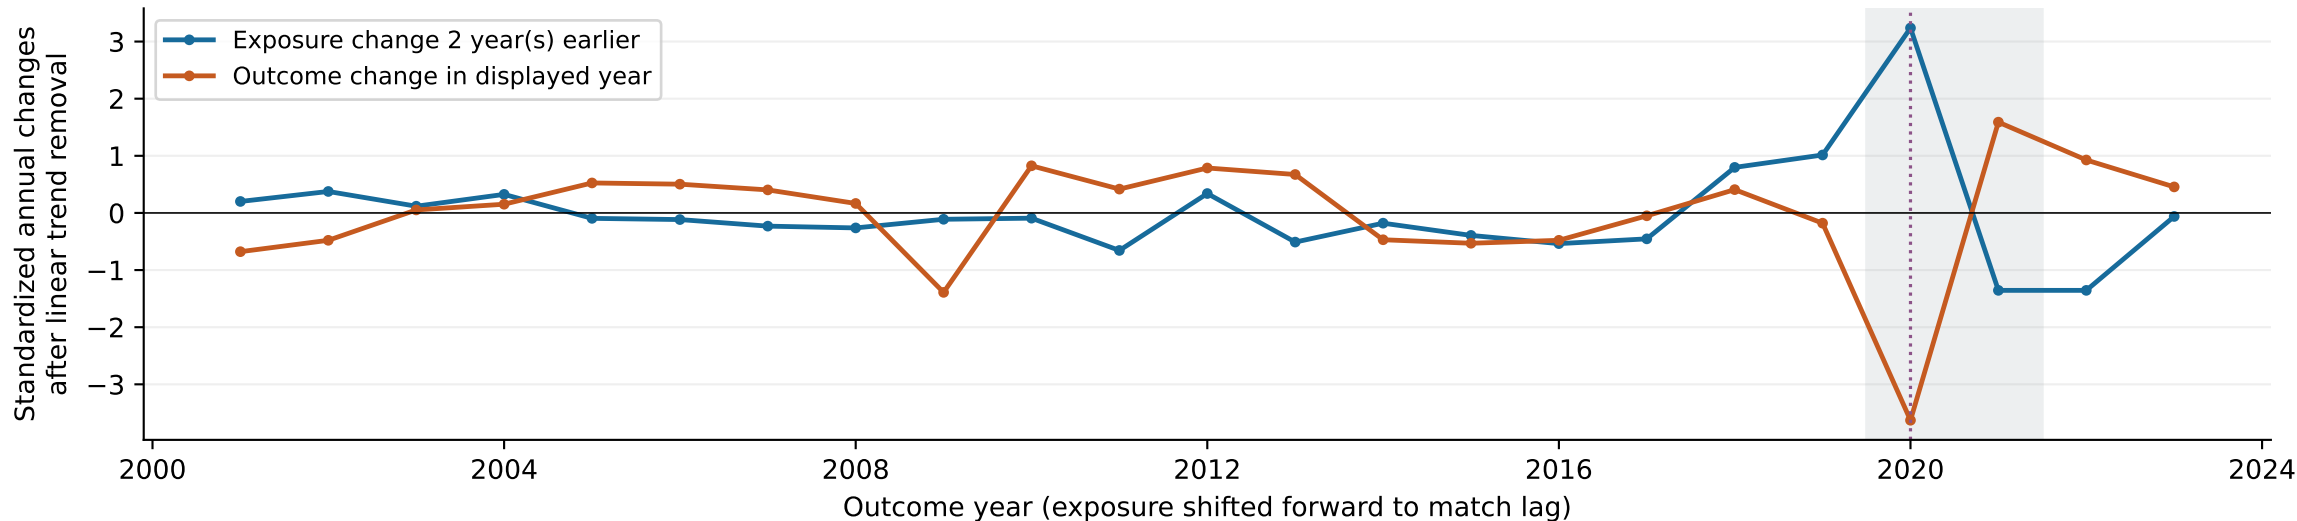

A. Reported exposure rate — original calendar years

B. Out-of-pocket health spending — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

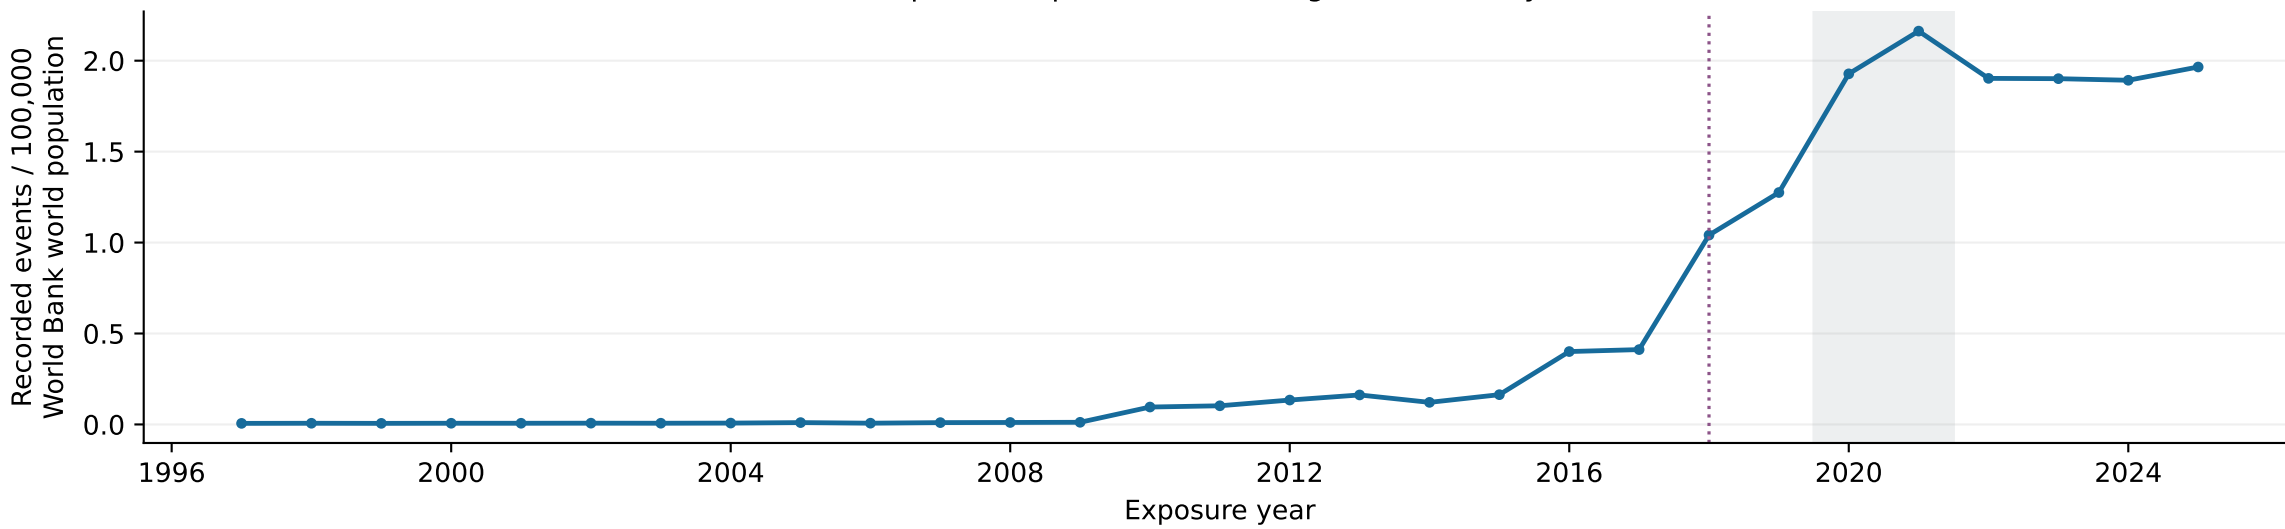

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: -0.149 ; fixed reporting-cohort sensitivity: -0.237 (regional exposure).

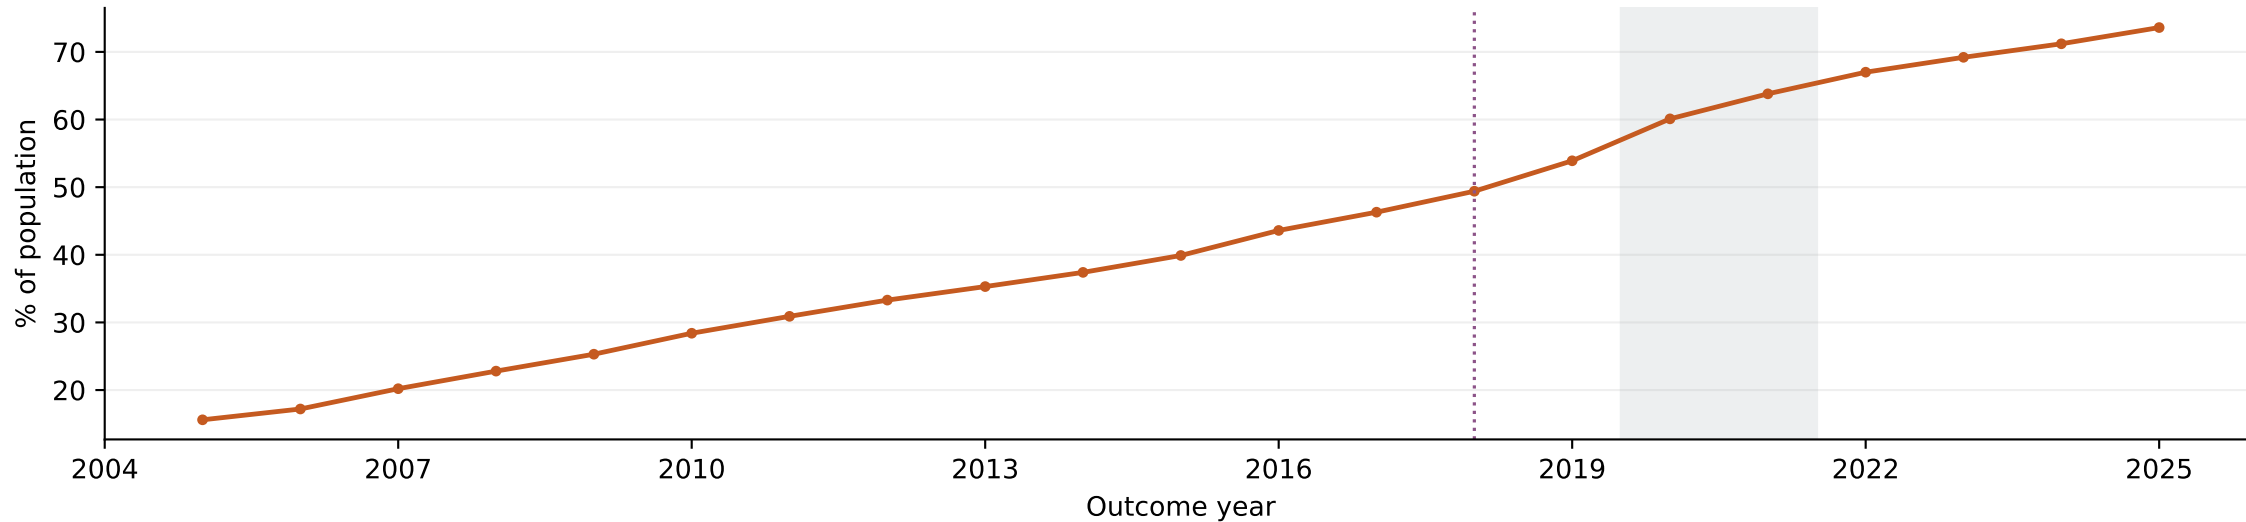

Demonstration events and internet use

Exposure leads by 1 year(s) | $r = +0.523$ | $p = 0.000327$ | adjusted $q = 0.0311$ | $n = 20$

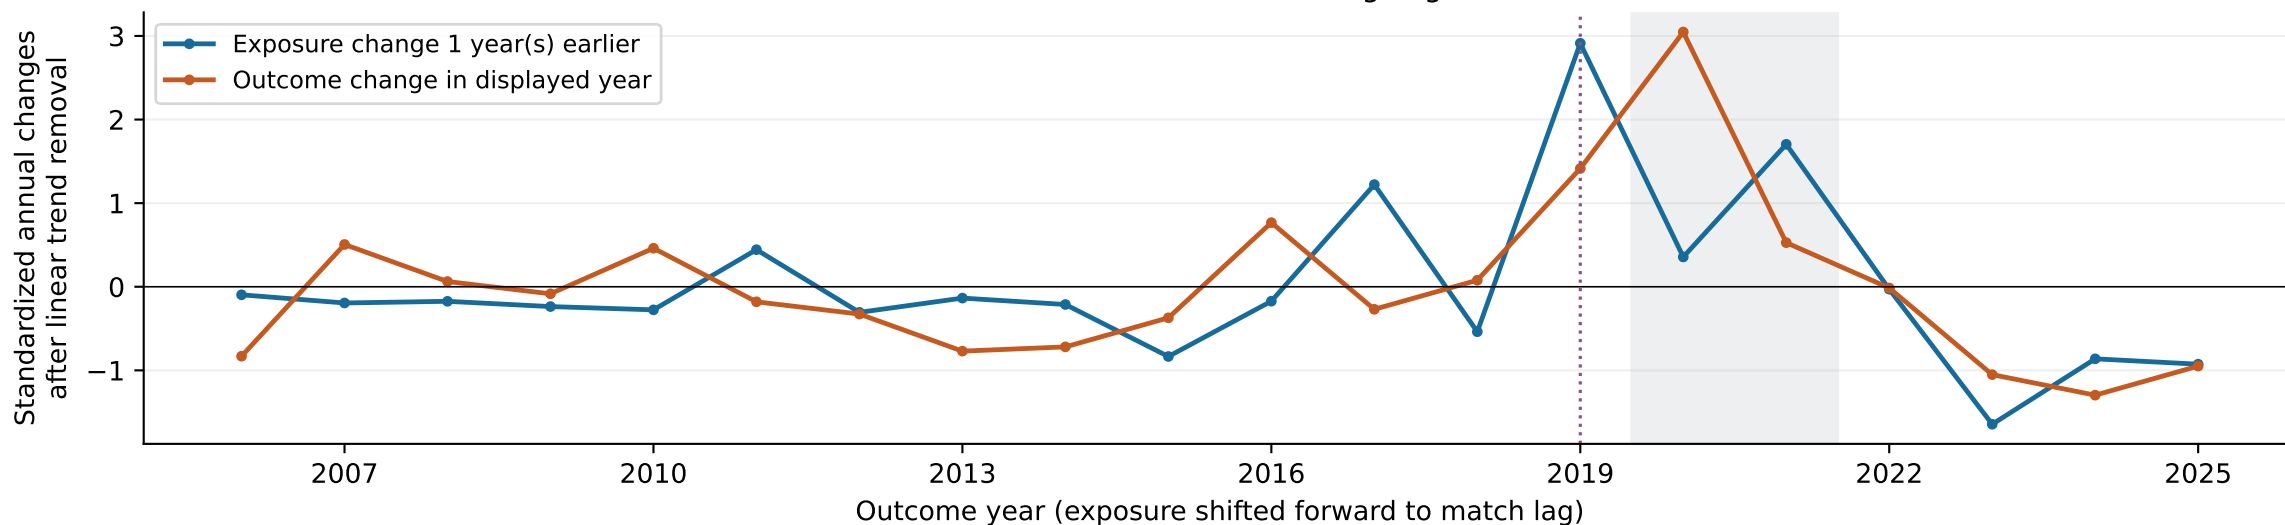

A. Reported exposure rate — original calendar years

B. Internet use — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

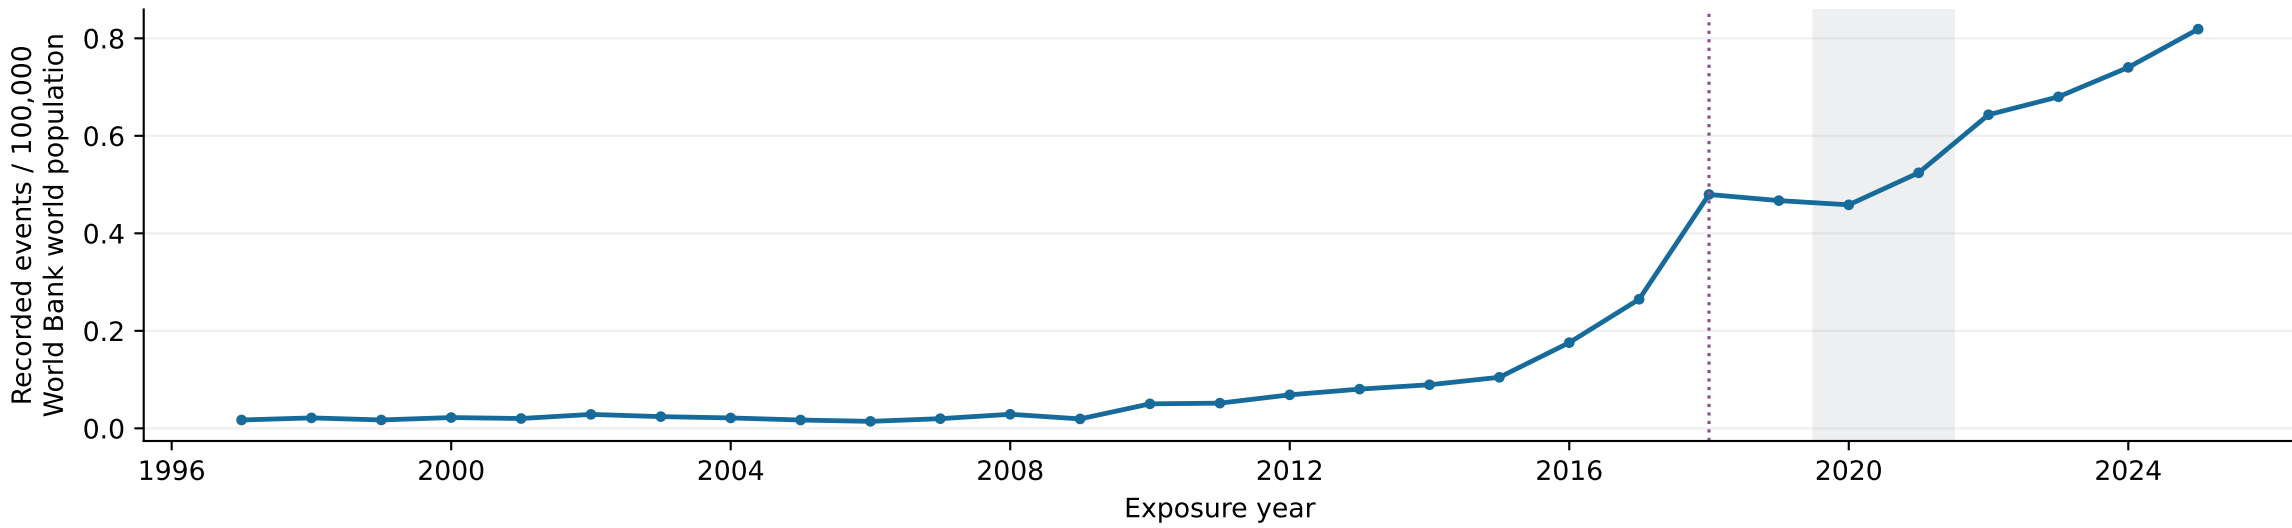

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: $+0.647$; fixed reporting-cohort sensitivity: $+0.508$ (regional exposure).

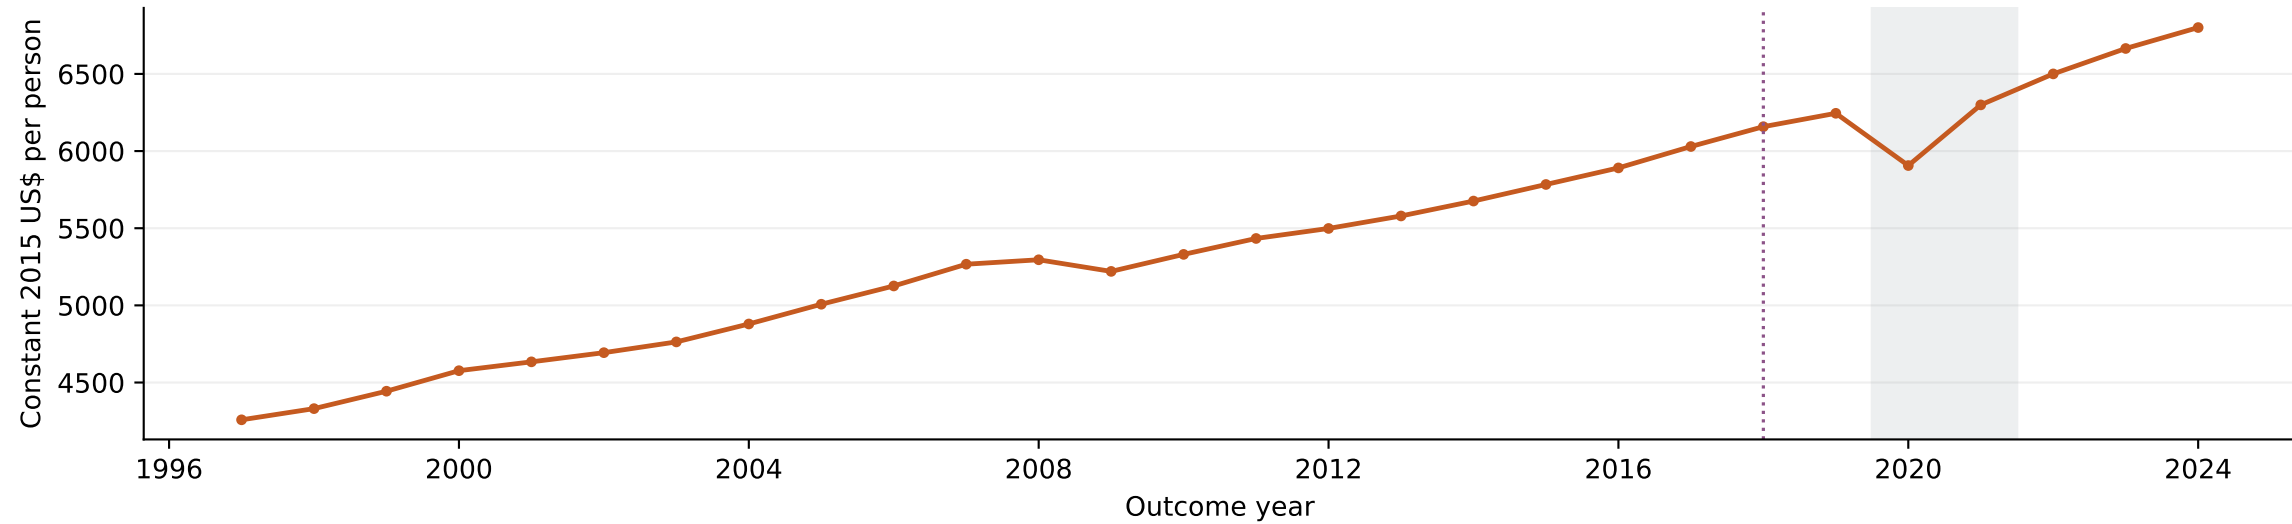

Events targeting civilians and real consumption per capita

Exposure leads by 2 year(s) | $r = -0.752$ | $p = 0.000691$ | adjusted $q = 0.0365$ | $n = 25$

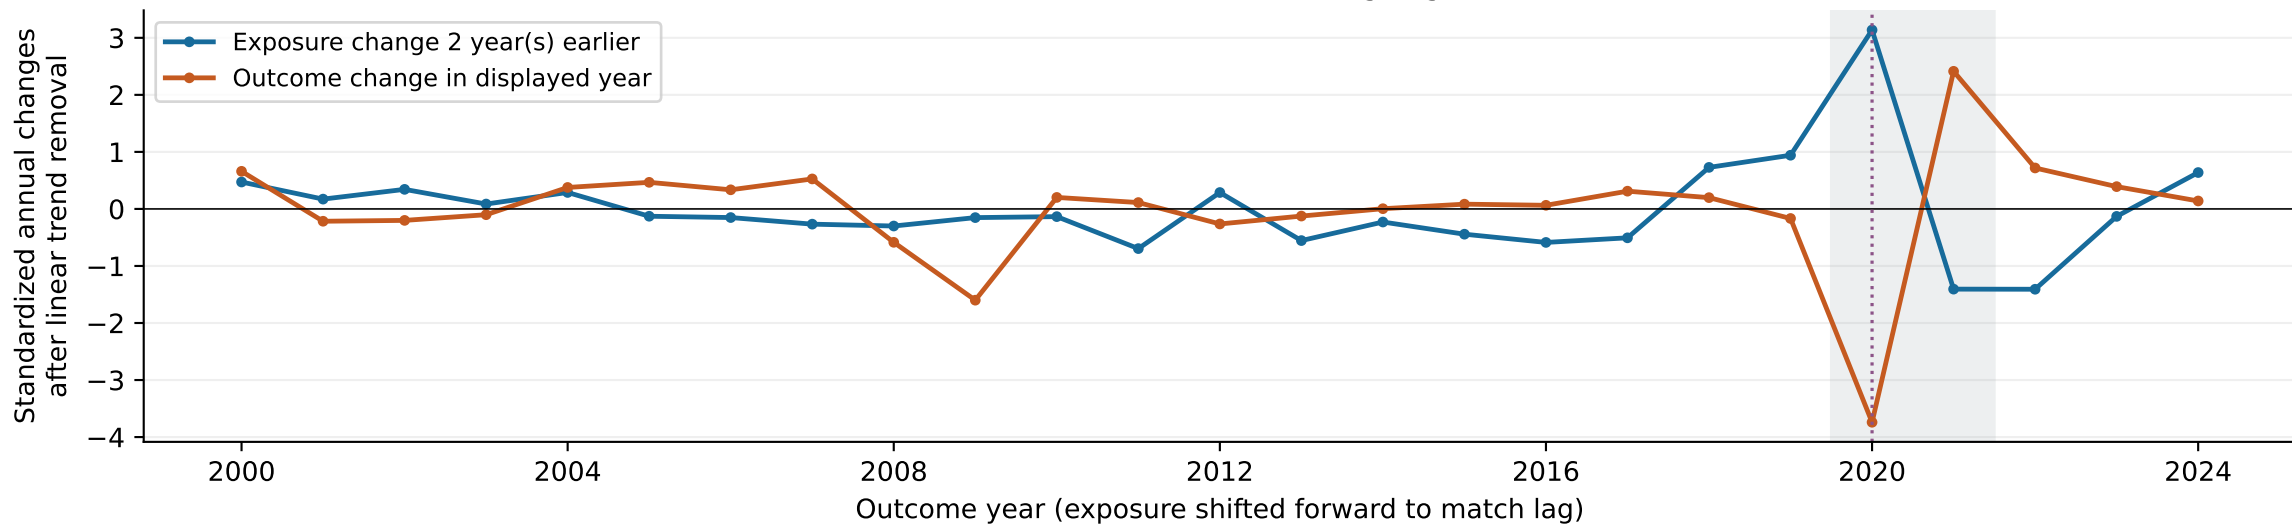

A. Reported exposure rate — original calendar years

B. Real consumption per capita — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

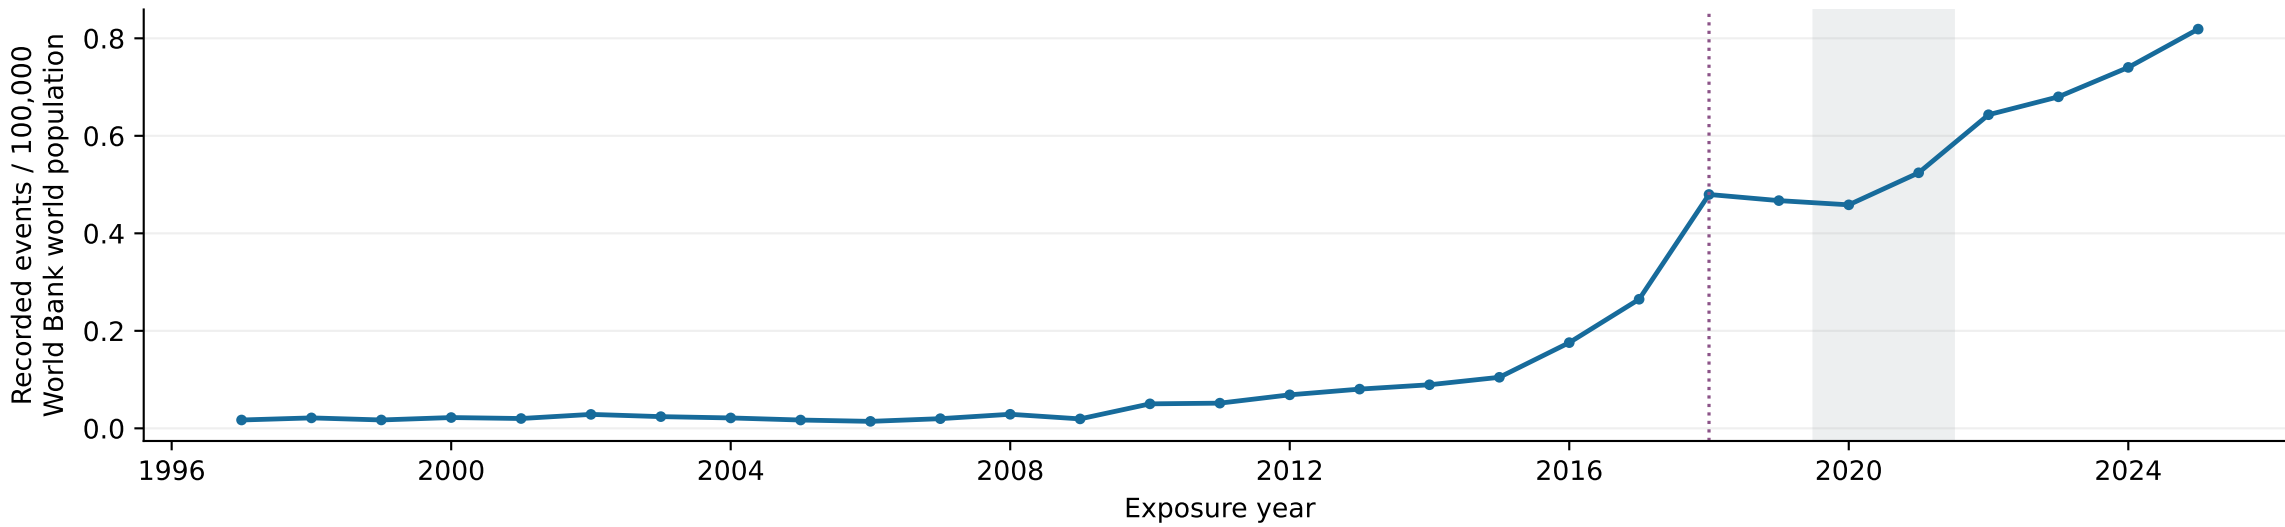

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: -0.118; fixed reporting-cohort sensitivity: -0.117 (regional exposure).

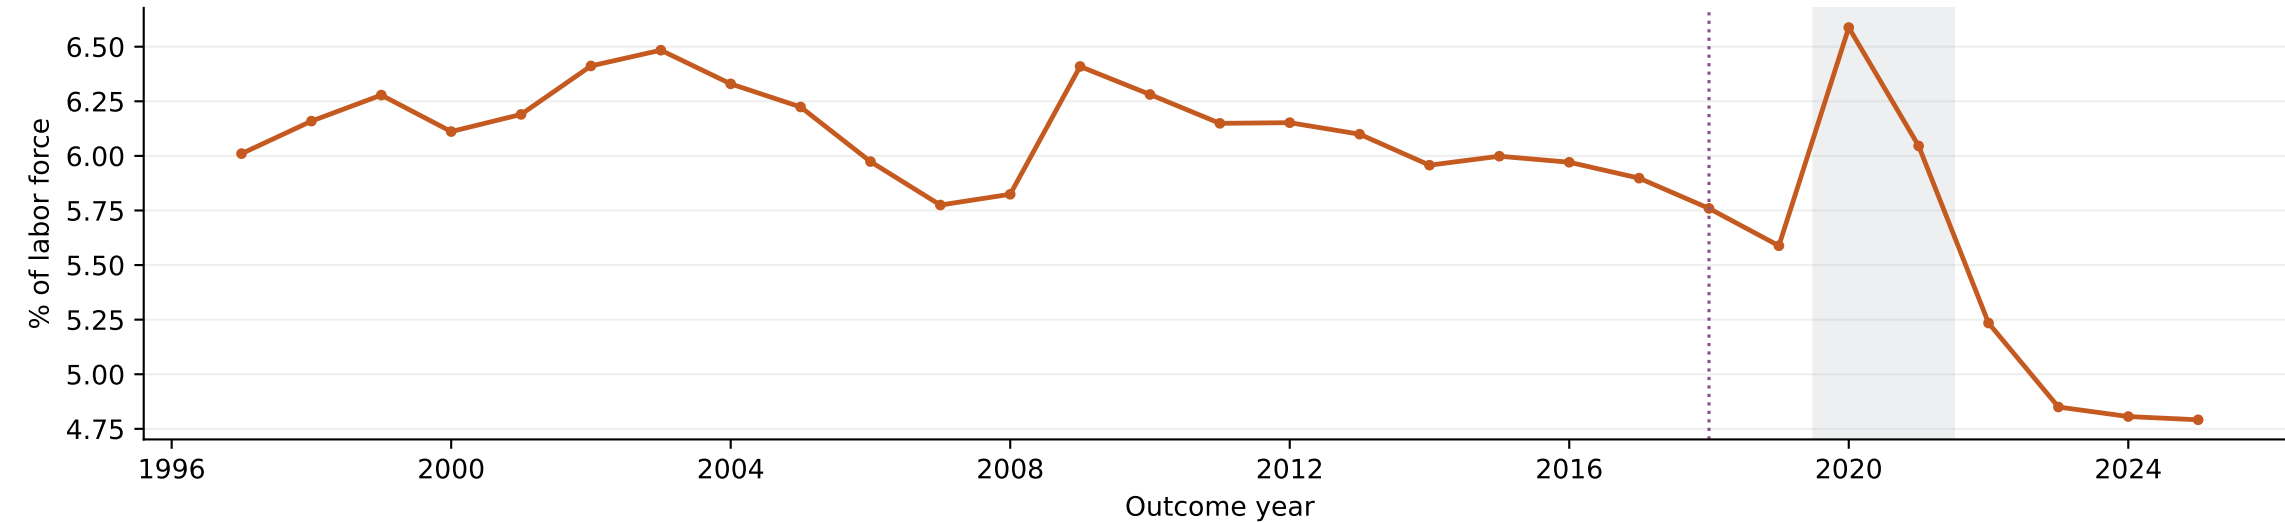

Events targeting civilians and unemployment

Exposure leads by 2 year(s) | $r = +0.694$ | $p = 0.000671$ | adjusted $q = 0.0365$ | $n = 26$

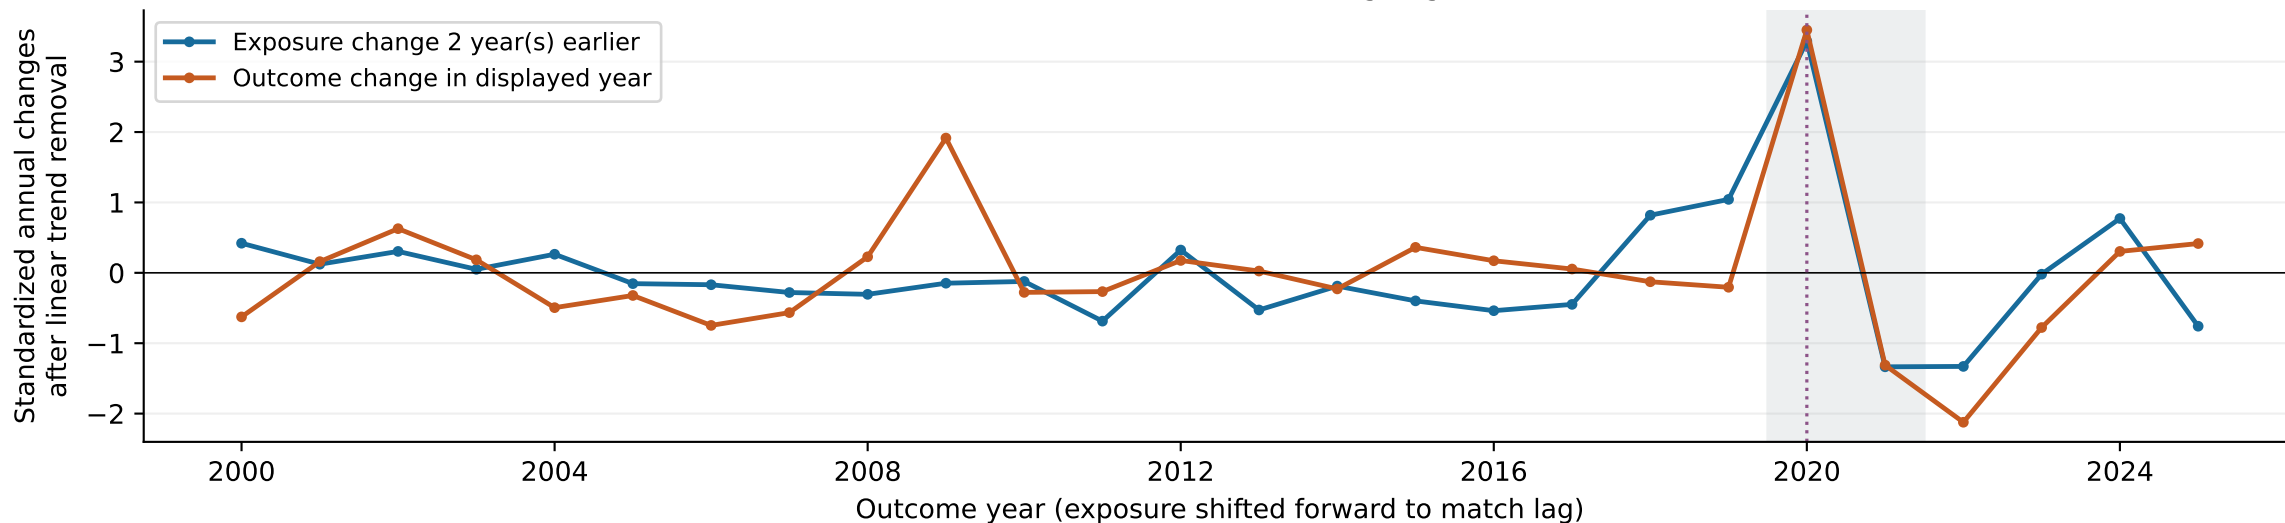

A. Reported exposure rate — original calendar years

B. Unemployment — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

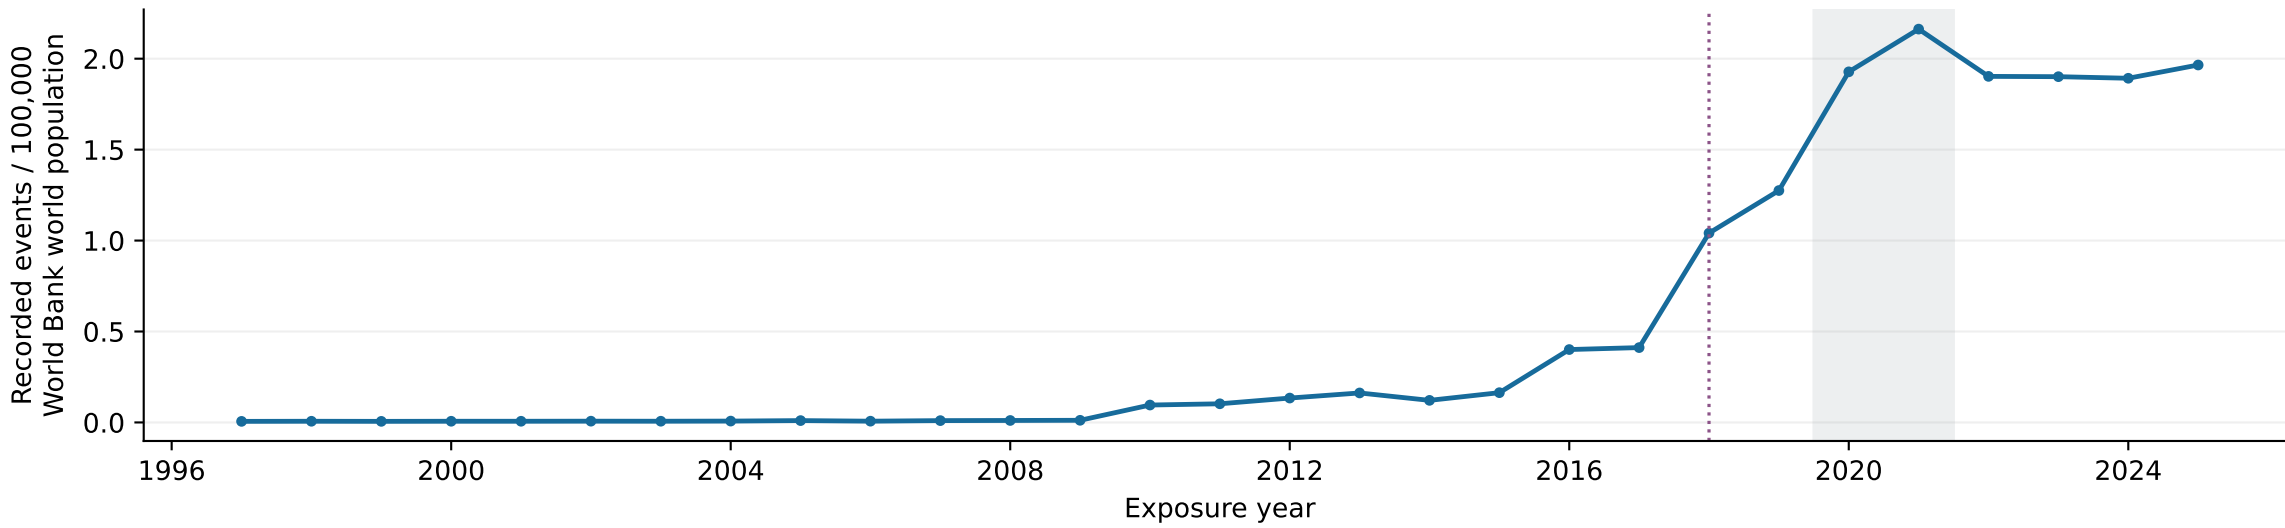

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: $+0.226$; fixed reporting-cohort sensitivity: $+0.069$ (regional exposure).

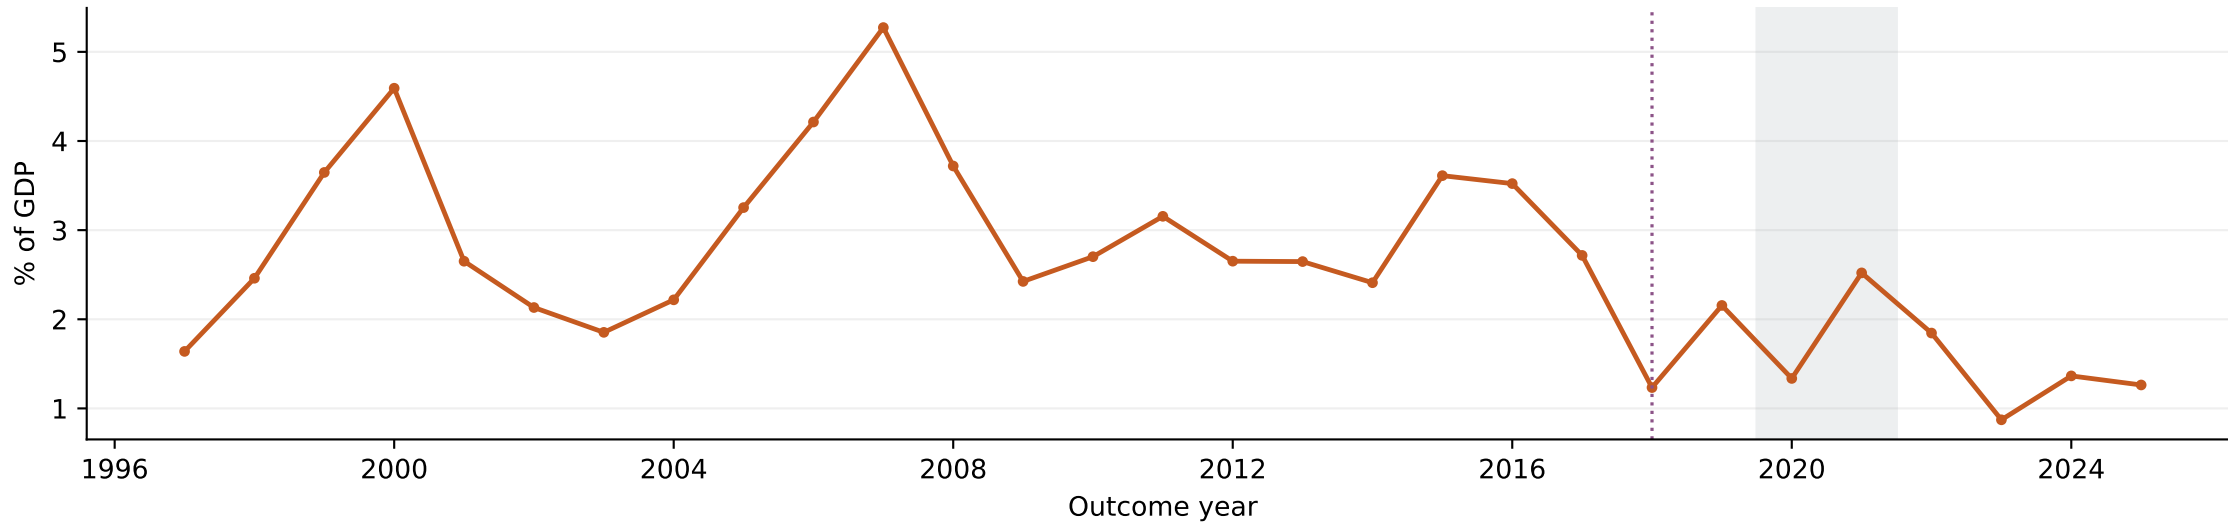

Demonstration events and fdi inflows / gdp

Exposure leads by 2 year(s) | $r = -0.315$ | $p = 0.000604$ | adjusted $q = 0.0365$ | $n = 26$

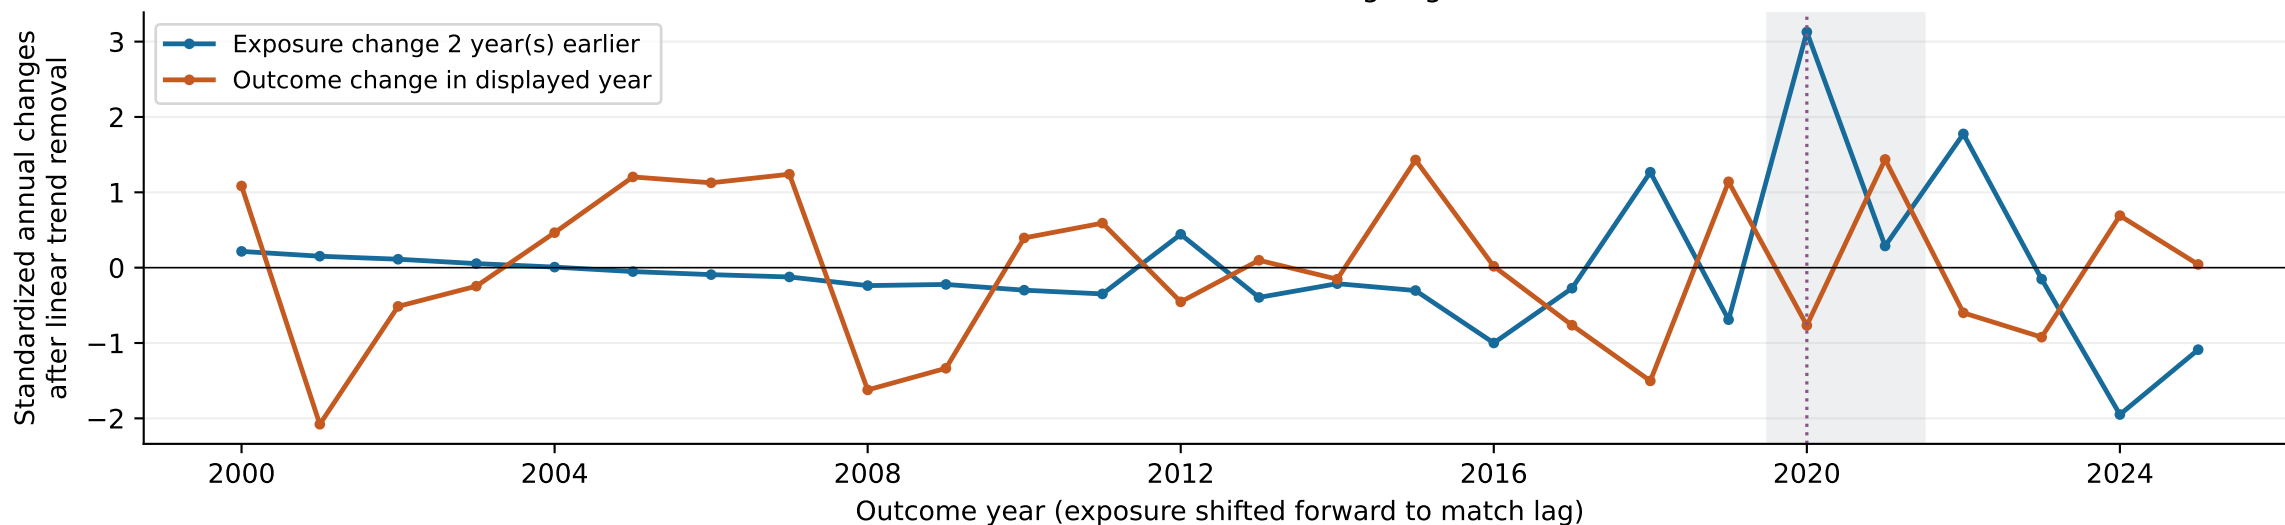

A. Reported exposure rate — original calendar years

B. FDI inflows / GDP — official world aggregate, original calendar years

C. Exact series used for the correlation — lag aligned and detrended

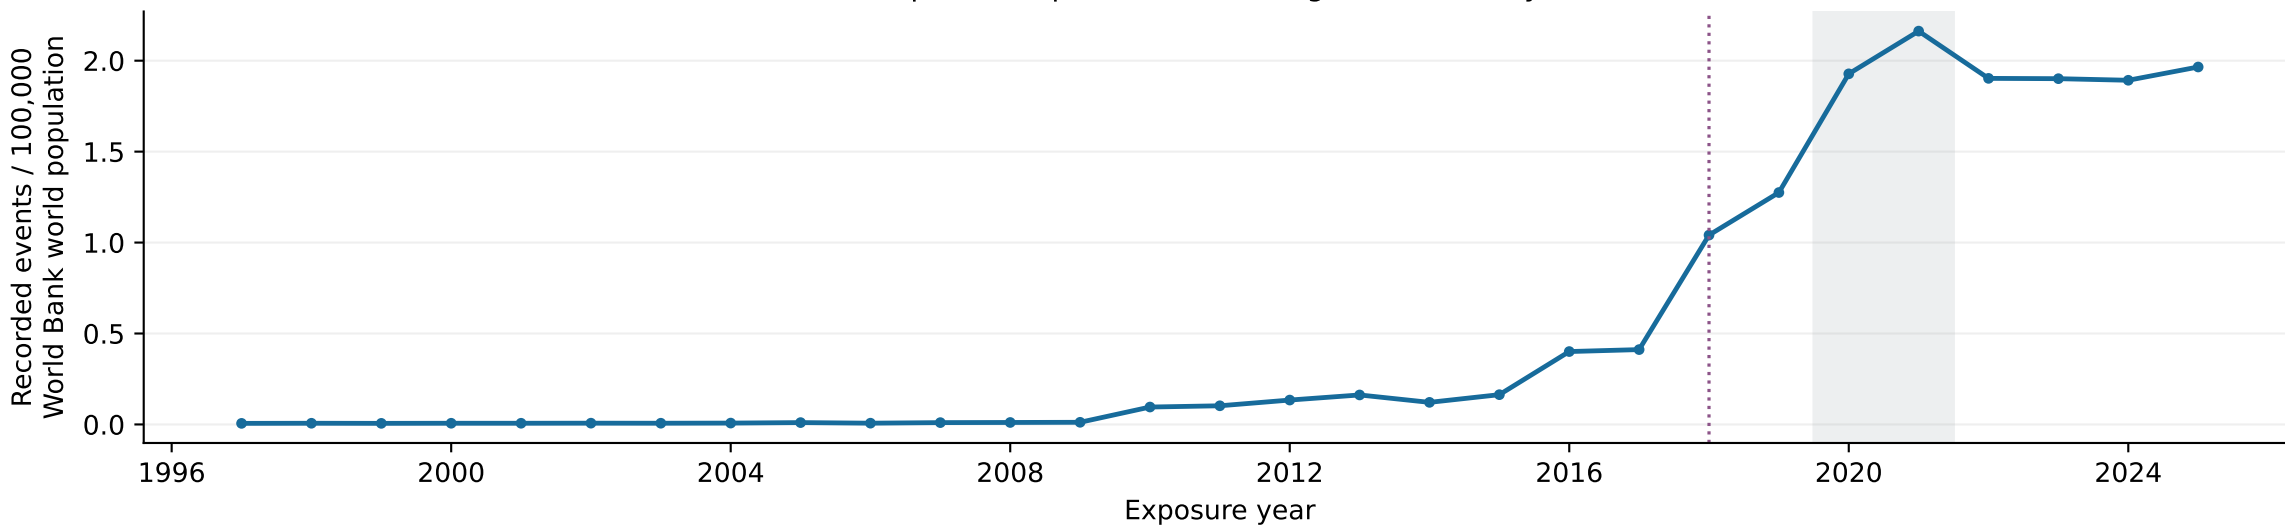

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: -0.361 ; fixed reporting-cohort sensitivity: $+0.268$ (regional exposure).

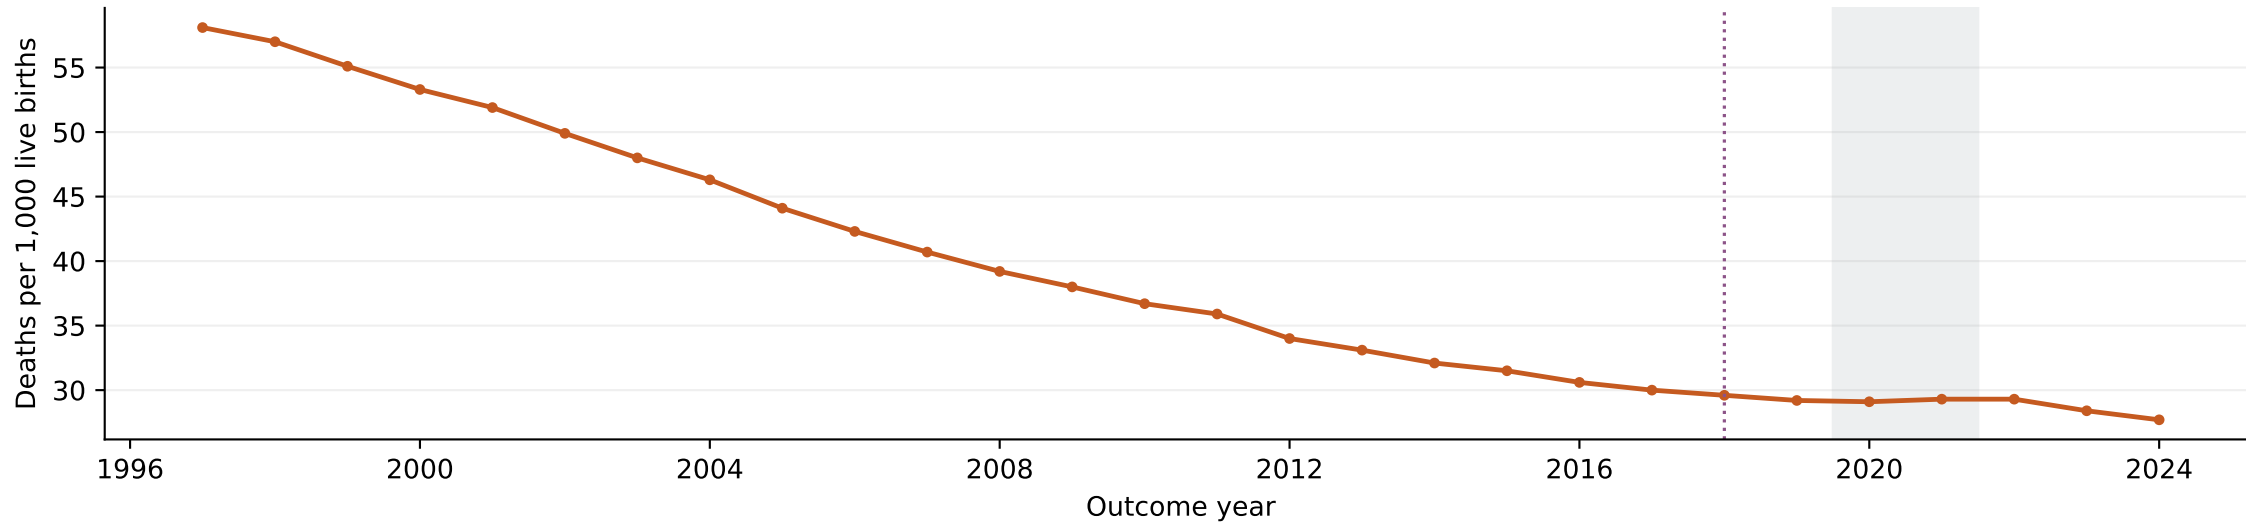

Demonstration events and infant mortality

Exposure leads by 2 year(s) | $r = +0.442$ | $p = 0.000475$ | adjusted $q = 0.0365$ | $n = 25$

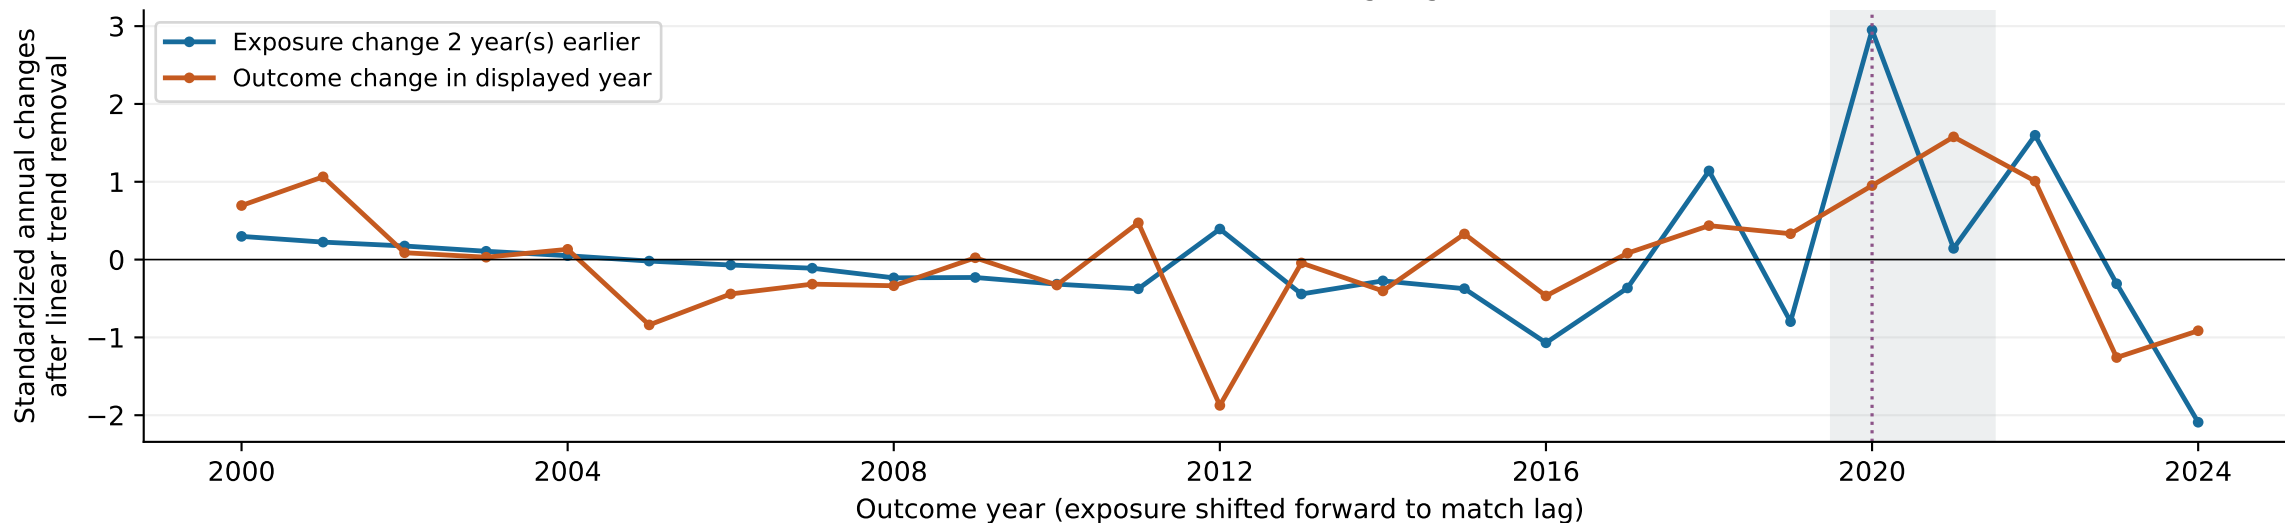

A. Reported exposure rate — original calendar years

B. Infant mortality — official world aggregate, original calendar years

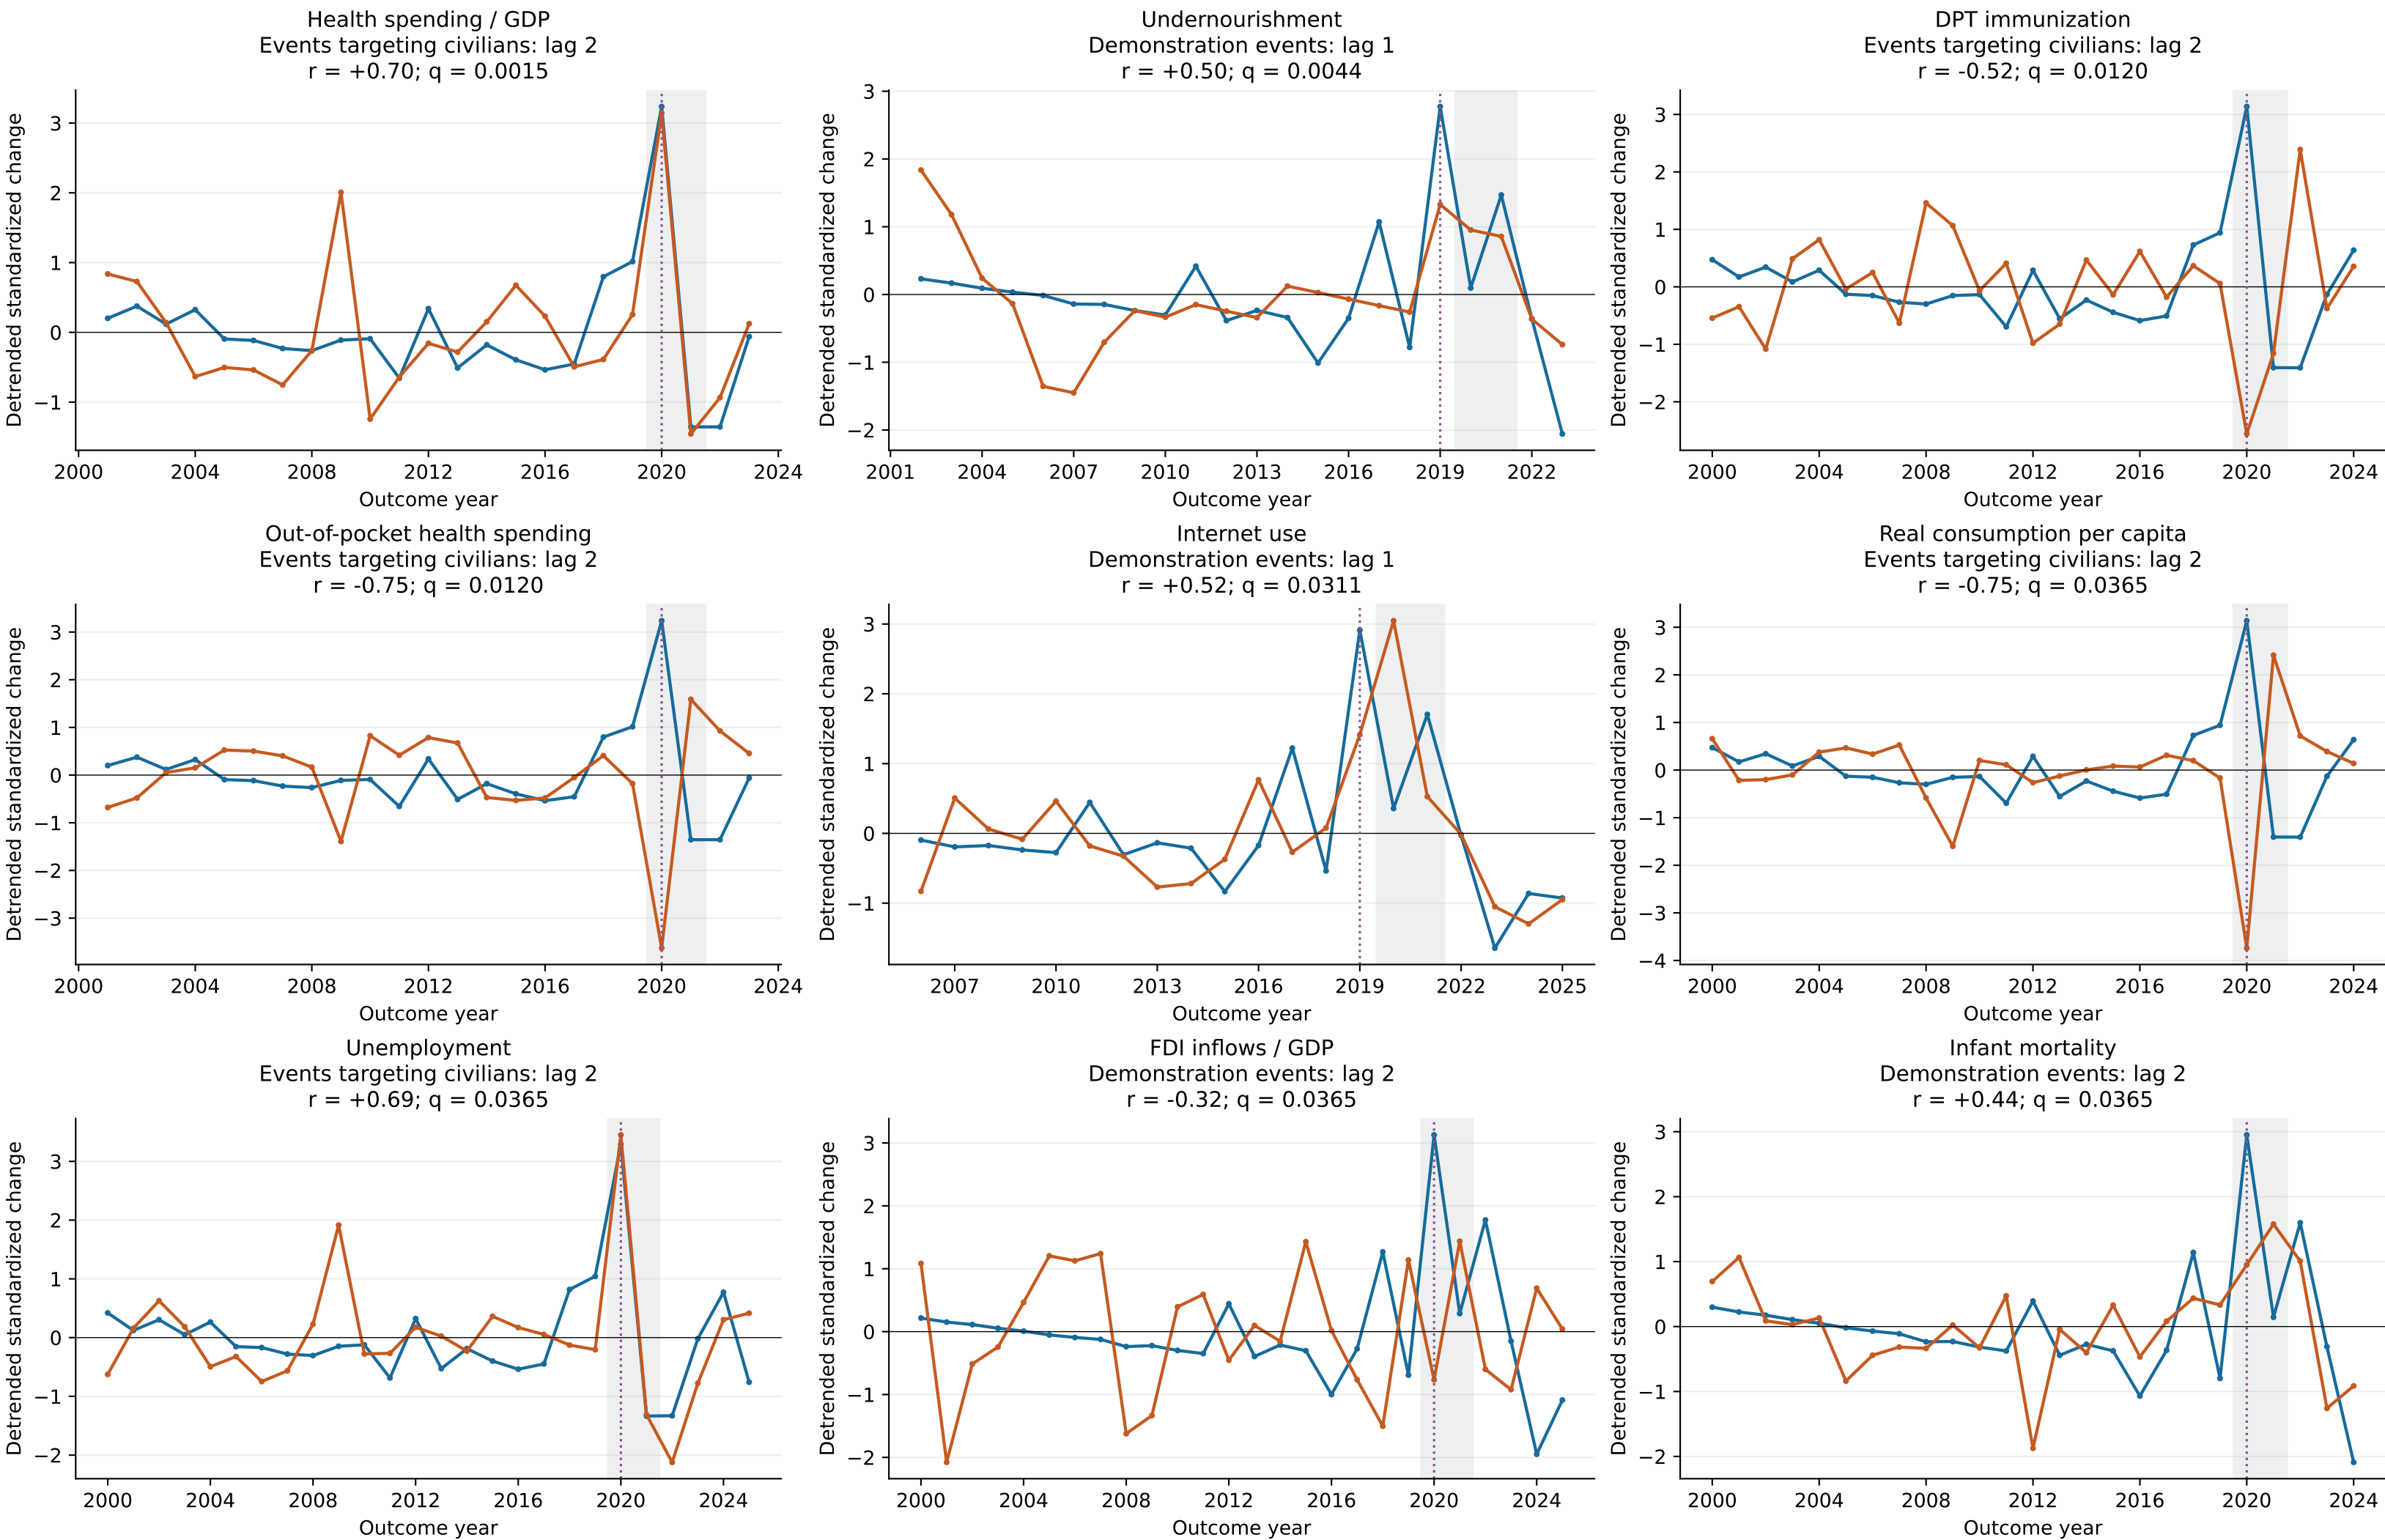

C. Exact series used for the correlation — lag aligned and detrended

Gray band: outcome/calendar years 2020-2021. Purple dotted line: 2018 reporting expansion; shifted by the lag in panel C.
 Raw panels are descriptive. Reported exposure coverage changes over time; q does not establish causation or robustness.
 Correlation omitting pandemic outcome years: $+0.347$; fixed reporting-cohort sensitivity: $+0.467$ (regional exposure).

Time series for all nine global associations passing FDR

Blue: earlier exposure change • Orange: outcome change • No axis inversion for negative correlations

Gray: 2020–2021. Purple dotted line: 2018 reporting expansion shifted to the outcome year by the tested lag.
 These exploratory global associations are sensitive to sample choices; none is confirmed by the corrected country-level screen.
